LOW E CLEANING & MAINTENANCE

In order to maintain clean glass surfaces cleaning must be performed on a regular basis. The following is a basic guide for cleaning products within the Low E Glass range:

1. Rinse with water to remove loose dirt and particles
2. Wash with warm soapy water or a vinegar based commercial solvent for stubborn stains.
3. Cleaning solutions should be wiped on to the glass surface using a circular motion and applying light to moderate pressure.
4. Rinse the glass surface generously with warm water to remove all traces of the cleaning solution.
5. Using a squeegee or a clean lint free cloth, remove the water from the glass surface.
6. Repeat the above steps if necessary.
7. These instructions are issued as a general guide only.

NB: Solvent manufacturer's directions and warnings must be followed at all times and care should be taken to avoid contact with any glazing sealants or other materials that may be affected by such.
